

Introducing the “Buddy” System

Three unique iPad/iPhone software solutions.
Use one or use them all!

Buddy System Features:

-  Inventory Buddy – A direct line to barnetPOS Back Office. Count, edit and update your inventory as you do it. (Optionally, a Bluetooth scanner can be added)
-  Receiving Buddy – Scan case codes and receive product directly from the pallet into your inventory!
-  Sales Buddy – No room for or need for a new full-time lane? Use your iPad as a back-up POS. Since the Sales Buddy is integrated with barnetPOS, transactions are included with daily sales, reporting, inventory, etc.

Other Sales Buddy uses include, scan & print labels, product searches, price checks and stocking cart options.

The Buddy System software is integrated with barnetPOS creating a time-saving, budget conscious option for inventory and back-up sales.
